Product Description

1.Product Description

If you want to make a load-bearing artificial grass system, the “drain shock absorber” is your best choice. It can replace cement, asphalt and gravel, etc., directly as the foundation, with a strong supporting capacity.

The "Split-type" product is a split structure consists of upper and lower parts, and each part is independent to be used for different purposes. The molecular group structure formed by a structural structure of a bispherical quadrolor is used. The contact surface of each point are shock absorbing and elastic.

2. Advantage

- (1)Hydrophobic function to ensure smooth drainage, and no ponding in the rainy days. Available for all-weather use. In winter, rubber will not get brittle like plastic products, and its sufficient elasticity can protect the human body from impact.
- (2) Available for small or difficult venues, such as building top, underneath bridge, etc. The transportation of the product is convenient, flexible and fact, and also can be collected quickly.
- (3) 15 years service life.
- (4) The shock absorbing function makes the product neither very soft to let the athletes feel weak, nor too hard to lose the protection.
